AI Architect | Gemini Enterprise & OpenAI Certified

As an AI Architect with 13+ years of engineering experience and 9 years leading Google Enterprise projects, I build deterministic, production-hardened AI platforms. My background spans FinTech microservices, high-frequency trading, and Big Tech integrations. Leveraging deep backend (Java/Kotlin/GCP) and quality engineering roots, I design secure, stateful multi-agent architectures, custom MCPs, enterprise RAG pipelines, and local LLMs to transition complex enterprise workflows into autonomous solutions.

TECHNICAL EXPERTISE

- **Agentic Development:** Python, FastAPI, LangGraph, LangChain, FastMCP (MCP), LlamaIndex (RAG), OKF, Vector DBs, Gemini Enterprise, Google ADK, Google Antigravity, OpenAI Codex, Claude Code, Local/Hybrid LLMs (Ollama, vLLM), PyTorch, Prompt Tuning.
- **AI Safety & Security:** Hallucination mitigation, Evals (RAGAS, LangSmith, LLM-as-a-Judge), Zero-Exfiltration architectures, Data Privacy (DLP, PII Redaction, RBAC), Prompt Injection defense.
- **Backend & Cloud:** Java, Kotlin, gRPC, REST, Event-Driven, GCP (Vertex AI, Spanner, BigQuery, GCS), Docker, Kubernetes, Protobuf.
- **Platform & Quality Eng:** BDD, Shift-Left/Right strategies, CI/CD (Rapid, GitHub Actions, Jenkins), TestNG, Selenium, Playwright/Mobilewright MCPs, JUnit, RESTAssured.
- **Leadership & Delivery:** Technical Presales (RFI/RFP), Stakeholder Management, Cross-Functional Team Leadership, Crisis Management, Agile/Kanban.

PROFESSIONAL EXPERIENCE

EPAM Systems (Client: Google) - AI Architect | Bengaluru | Jan 2025 – Present

- **Enterprise AI Productization:** Architected a modular suite of AI assistants covering diverse end-to-end SDLC and STLC phases—from planning to delivery. Adopted across 10+ global projects using an 80/20 core-to-custom architecture to maximize scalability.
- **Agentic, RAG & OKF Workflows:** Engineered stateful multi-agent pipelines (LangGraph, Google ADK) grounded in enterprise data via robust RAG and OKF. Implemented strict hallucination guardrails, accelerating SDLC workflows by 30%.
- **Legacy Transformation & Task Automation:** Evolving a legacy TaaS platform into an autonomous ecosystem using custom Model Context Protocol (MCP) tools, and leveraging Google Antigravity (Jetski) for advanced task automation.
- **Zero-Exfiltration Infrastructure:** Designed a hybrid dynamic LLM routing pipeline that shifts sensitive data workloads from public clouds to secure, local open-weight models, guaranteeing 100% data privacy compliance.

EPAM Systems (Client: Google) - TaaS Platform Lead | Bengaluru/Hyderabad | July 2021 – Dec 2024

- **Crisis Recovery & Vendor Consolidation:** Parachuted into a critically stalled integration project, rescuing it in 2 weeks. Led the engineering team to deliver 300+ automation bindings for different 1P and 3P systems, ultimately securing exclusive vendor consolidation for EPAM.
- **Business Expansion:** Spearheaded technical engineering for RFI/RFP responses, successfully onboarding 15+ new enterprise clients onto the TaaS platform by demonstrating fault-tolerant orchestration (pause/resume/recovery).
- **Platform Optimization:** Developed core gRPC services and Spanner DAOs. Pioneered a hermetic testing stack using TIN/ITS, which slashed regression testing time by 80% and boosted test coverage from 20% to 95%.

EPAM Systems (Client: Google) - Senior SDET – Google Supply Chain & Logistics | Hyderabad | Sep 2017 – June 2021

- **Workflow Automation:** Built proprietary BDD frameworks to automate warehouse inventory (receiving, returns) and device repair workflows, achieving 90% coverage.
- **Enterprise Scale:** Designed performance and integration testing architectures to validate high-volume, concurrent APIs, ensuring seamless data sync across 3rd-party PLMs and middleware networks.

Kiya.ai (Client: TP ICAP) - SDET | London/Pune | Jan 2016 – Aug 2017

- **Cost Optimization:** Led a 5-member global team to engineer a custom E2E automation framework from scratch, replacing expensive licensed tools and reducing manual testing dependency by 80%.
- **CI/CD Acceleration:** Automated 95% of regression tests for a high-frequency Trading Platform, integrating execution directly into Jenkins to significantly accelerate release velocity.

Wipro (Client: Credit Suisse) - Java Backend Developer | Pune | Mar 2013 – Dec 2015

- **Microservices Migration:** Engineered scalable Java/Spring Boot RESTful APIs to successfully transition legacy core banking applications from a monolith to a microservices architecture. Maintained 24/7 L2/L3 stability for global financial systems.

CERTIFICATIONS, AWARDS & EDUCATION

- **Certifications:** Gemini Enterprise & OpenAI Certified, Anthropic Claude Code, Google Java/Kotlin.
- **Awards:** Google Project Triumph Champion, EPAM Impact & Best Performer Awards, Client Excellence Awards.
- **Education:** B.Tech in Computer Science & Engineering | BPUT | **CGPA: 8.55**
