

Ashish Sahu

GenAI Quality Architect | AI-Driven STLC Engineering | Lead SDET | 8+ Yrs Google Projects

Bengaluru, India | (+91) 9178038828 | [Email](#) | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) | [Yantra - My AI Digital Twin](#)

PROFESSIONAL SUMMARY

GenAI Quality Architect, Lead SDET and Full Stack Engineer with 13+ years of experience, including 8+ years leading enterprise-scale Google projects. Transitioning from core backend development, I specialize in applying AI to revolutionize the Software Testing Life Cycle (STLC). I architect stateful, multi-agent workflows (LangGraph/LangChain) across OpenAI, Google Vertex AI, and Anthropic Claude, engineering self-correcting AI agents and custom tools to resolve critical project impasses and drive massive efficiency gains.

TECHNICAL EXPERTISE

- **Programming Languages:** Python, Java, Kotlin, JavaScript, SQL.
 - **Agentic AI & Orchestration:** Google ADK, LangGraph, LangChain, EPAM ELITEA, Stateful Multi-Agent Workflows, Human-in-the-Loop (HITL), RAG, Vector DB, MCP, Prompt Engineering.
 - **Enterprise & Open-Weight LLMs:** Anthropic Claude (API & Claude Code), OpenAI (GPT-4o), Google Gemini (Vertex AI), Azure OpenAI, AWS Bedrock, DeepSeek-R1, Meta Llama 3.1, Local Inference (Ollama), Zero Data Exfiltration.
 - **Quality Architecture:** TAF Design, Selenium, Playwright, TestNG, Cucumber, Appium, Espresso, RestAssured, Test Pyramid, Shift-Left/Right, GenAI Quality Assurance, LLM Evaluation, Bias Detection.
 - **Backend & Microservices:** Spring, Google Guice, Microservices, REST, gRPC, Protobuf, Pub-Sub.
 - **Cloud, Data & CI/CD:** Google Cloud Platform (GCP), Google Spanner, BigQuery, SQL, Oracle, CI/CD Pipelines (Jenkins, Rapid).
 - **Leadership:** Team Leadership, Stakeholder Management, Cross-Functional Collaboration, Technical Presales (RFI/RFP), Crisis Management.
-

PROFESSIONAL EXPERIENCE

EPAM (for Google) | GenAI Quality Architect & Lead SDET Sep 2022 – Present | Bengaluru

- **Accelerated test creation by 30% and eliminated LLM hallucinations** by engineering stateful, multi-agent workflows (Google ADK, LangGraph, LangChain) with custom MCPs, HITL breakpoints, and self-correcting evaluation loops.
- **Secured robust AI-driven test execution** by implementing continuous evaluation pipelines and establishing key metrics for LLM output accuracy, agent reliability, and bias.
- **Guaranteed zero data exfiltration for sensitive workloads** by integrating local open-weight models (DeepSeek-R1, Llama 3.1) via Ollama, and architecting deployment-agnostic pipelines routing reasoning tasks across Anthropic Claude 3.7, OpenAI GPT-4o, and Google Gemini.
- **Secured exclusive vendor consolidation for EPAM** by rescuing a critically stalled, multi-vendor project within two weeks through a complete overhaul of testing architecture and execution pipelines.
- **Onboarded 5 new enterprise projects** onto a proprietary **TaaS platform** by leading engineering efforts for RFI/RFP responses and demonstrating fault-tolerant orchestration (pause/resume/recovery) to stakeholders.

EPAM (for Google) | Senior SDET Sep 2017 – Aug 2022 | Hyderabad

- **Cut regression testing time by 40-50%** by architecting a proprietary, highly scalable E2E testing framework (Kotlin, Java) to scale automation across the hardware supply chain.
- **Increased critical integration test coverage from 20% to 75%+** by engineering 50+ automation bindings (gRPC, REST, EDI) bridging retail POS, SAP S/4HANA, IBM Sterling, Salesforce, and Boomi.
- **Reduced P0/P1 production defects by 30%** by automating massive-scale core supply chain workflows (BOPIS, O2C, P2P, RMA/Repair).
- **Reduced maintenance overhead by 25% and boosted execution speed by 15%** by migrating manual REST integrations to reliable gRPC test services and implementing advanced API mocking.
- **Decreased test flakiness by 20%+** by resolving infrastructure bottlenecks and developing dynamic test data provisioning as the core technical SME and on-call responder.

Kiya.ai (for TP ICAP) | SDET Jan 2016 – Aug 2017 | London/Pune

- **Led a 5-member global QA team**, driving cross-functional collaboration and managing stakeholder expectations from the **London client office**.
- **Reduced manual workforce dependency by 80% and cut infrastructure costs** by designing a robust Test Automation Framework from the ground up to replace the licensed VeriFix tool.
- **Automated 95% of legacy regression tests** and seamlessly integrated with Jenkins to minimize deployment errors and drastically improve release velocity.

Wipro (for Credit Suisse) | Java Backend Developer Mar 2013 – Dec 2015 | Pune

- **Engineered highly scalable Java/Spring RESTful APIs** to drive the transition from monolithic to microservice architectures for core banking applications.
- **Maintained 24/7 stability of global financial systems** by performing root cause analysis and rapid incident resolution for critical L2/L3 backend services.

AWARDS & CERTIFICATIONS

- **Top Honors:** Google Project Triumph Champion; "Thank You from Client" Award; EPAM Impact and Best Performer Awards.
- **Recent Certifications:**
 - **Google:** Java & Kotlin Readability.
 - **Anthropic:** Claude Code in Action, Advanced MCP, Claude API & Subagents.
 - **EPAM:** Generative AI, Prompt Engineering, Certified Technical Interviewer.

EDUCATION

- **B.Tech in Computer Science and Engineering (CSE)** | Biju Patnaik University of Technology (BPUT) | CGPA: 8.55
